

# Listening to the Data Adding and Analyzing Music Data in Splunk

Sarah Moir, Program Manager

October 2018

# Forward-Looking Statements

During the course of this presentation, we may make forward-looking statements regarding future events or the expected performance of the company. We caution you that such statements reflect our current expectations and estimates based on factors currently known to us and that actual events or results could differ materially. For important factors that may cause actual results to differ from those contained in our forward-looking statements, please review our filings with the SEC.

The forward-looking statements made in this presentation are being made as of the time and date of its live presentation. If reviewed after its live presentation, this presentation may not contain current or accurate information. We do not assume any obligation to update any forward-looking statements we may make. In addition, any information about our roadmap outlines our general product direction and is subject to change at any time without notice. It is for informational purposes only and shall not be incorporated into any contract or other commitment. Splunk undertakes no obligation either to develop the features or functionality described or to include any such feature or functionality in a future release.

# SARAH MOIR

**Program Manager at Splunk  
Former Radio DJ & Station Manager at WESN 88.1FM**

# Adding and Analyzing Music Data in Splunk

**You could do this with any kind of data**

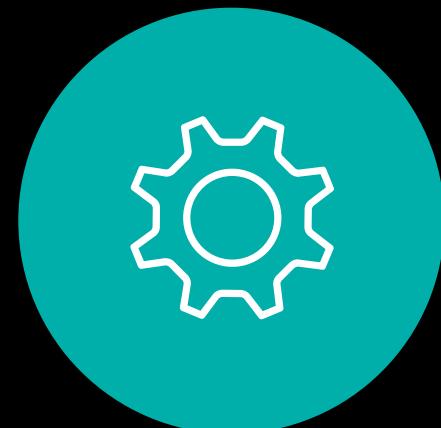

# Where to start

# Get data in

# Search and visualize

# What's next

# Where to start

Getting data in...

# What do I want to know?

# Use cases matter for data ingest

- ▶ Start by identifying use cases!
    - What's my listening pattern around a concert?
    - What artists did I discover in a particular year?
    - What songs did I listen to by a certain artist first, and how does that compare with my favorite songs by that artist?
    - Do I listen to more artists now? Do I listen to mostly different artists?
    - What is my favorite music venue in CA? In IL?
    - Am I more likely to skip a concert if I bought the tickets far in advance?

# What data do I need to get these insights?

# Identify data types based on use cases

- ▶ Listening pattern around a concert?
    - Listening data and concert data
  - ▶ Artist discovery? Track discovery? Track popularity?
    - Listening data
  - ▶ Favorite music venue?
    - Concert data
  - ▶ Skipping concerts according to ticket purchase date?
    - Concert data, ticket purchase data

# What data is out there?

# **Assess the data available to you**

## Music data I “created”

- ▶ Listening data tracked by Last.fm
  - ▶ Concerts attended tracked by me
  - ▶ iTunes library
  - ▶ Spotify library
  - ▶ SoundCloud library

# Music data externally available

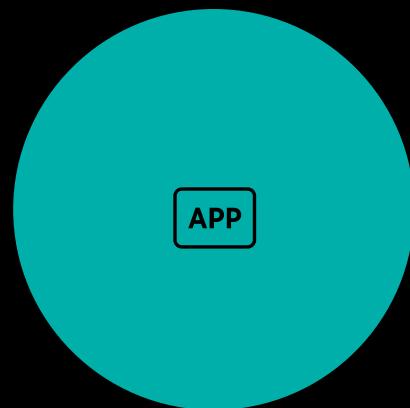

- ▶ MusicBrainz metadata database
  - ▶ Spotify audio features data
  - ▶ Songkick concert data

# How I got the data in

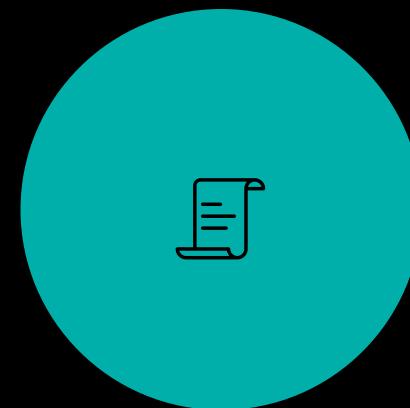

## Figure out the easiest way to get data in

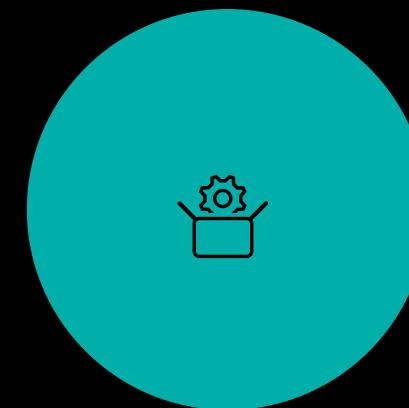

# File Upload

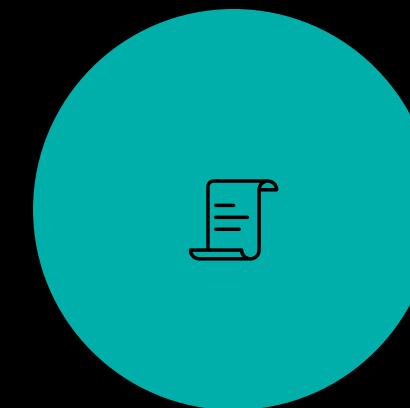

# Add-on Builder

# Custom Alert Action

# Lookup Editor App

# Modular Input

# File Upload: iTunes Library XML party

- ▶ Uploaded the XML of the iTunes library file into Splunk.
  - ▶ The XML of the iTunes library is not the XML format expected by Splunk
    - KV\_mode=xml did not work for me, because the XML structure was not <field>VALUE</field> but rather <key>FIELD</key><key type>VALUE</key type>.
  - ▶ Cue struggle.
  - ▶ Cue asking people who know regex to write me regex.
  - ▶ Cue celebratory gratitude.

# Add-on Builder: Last.fm Data

## Hooray for unauthenticated APIs

- ▶ Add-on builder made it super easy to write a modular input.
- ▶ JSON-formatted data returned by the API
- ▶ Put together a little setup screen:
  - Request the username from the user
  - Ask for the API key (so that mine isn't hardcoded into it)
- ▶ Super easy UI for extracting fields from JSON events
- ▶ Checkpointing so that I can backfill data from when Splunk isn't running
- ▶ Backfilled my data with file uploads so I didn't have to wait for the input to churn through it all.

# Custom Alert Action: Songkick Concert Data

# Python

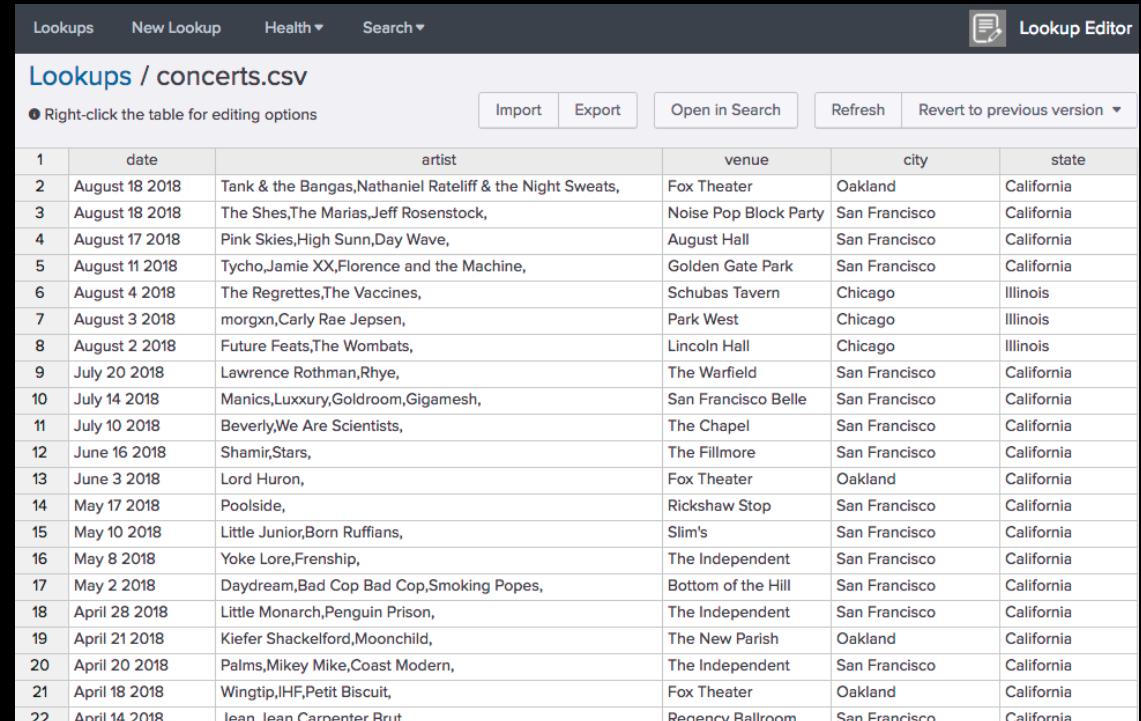

- ▶ Wanted to identify upcoming concerts for artists according to specific factors
    - Historical factors: which artists are above my average listen threshold and coming to town soon?
    - Trending factors: which artists have I recently discovered that are coming to town soon?
  - ▶ Wanted to learn how to write an alert action

**powered by**  
**songkick**

# Lookup Editor: Concert and Ticket Data

## Manually-managed data

- ▶ Needed a way to keep track of external, time-ordered data manually
- ▶ Maintain 3 lookups
  - 2 concert lookups: 1 multi-value with artist field, 1 with added context of opener and headliner.
  - 1 ticket purchase lookup with date purchased, on sale date, face value, actual cost, and more!

The screenshot shows the Splunk Lookup Editor interface. At the top, there are tabs for 'Lookups', 'New Lookup', 'Health', and 'Search'. On the right, there's a 'Lookup Editor' button. Below the tabs, the title 'Lookups / concerts.csv' is displayed, followed by a note: 'Right-click the table for editing options'. There are buttons for 'Import', 'Export', 'Open in Search', 'Refresh', and 'Revert to previous version'. The main area is a table with 22 rows of data, each representing a concert. The columns are: index (1-22), date, artist, venue, city, and state. The data includes various artists like Tank & the Bangas, Nathaniel Rateliff & the Night Sweats, The Shes, Jeff Rosenstock, Pink Skies, Day Wave, Tycho, Jamie XX, Florence and the Machine, The Vaccines, The Regrettes, Carly Rae Jepsen, Future Feats, The Wombats, Lawrence Rothman, Rhye, Manics, Luxury, Goldroom, Gigamesh, Beverly, We Are Scientists, Shamir, Stars, Lord Huron, Poolside, Little Junior, Born Ruffians, Yoke Lore, Frenship, Daydream, Bad Cop Bad Cop, Smoking Popes, Little Monarch, Penguin Prison, Kiefer Shackelford, Moonchild, Palms, Mikey Mike, Coast Modern, Wingtip, IHF, Petit Biscuit, Jean Jean, Carpenter Brut, and Fox Theater, Oakland, San Francisco, Chicago, Illinois, and California.

1	date	artist	venue	city	state
2	August 18 2018	Tank & the Bangas,Nathaniel Rateliff & the Night Sweats,	Fox Theater	Oakland	California
3	August 18 2018	The Shes,The Marias,Jeff Rosenstock,	Noise Pop Block Party	San Franciso	California
4	August 17 2018	Pink Skies,High Sunn,Day Wave,	August Hall	San Franciso	California
5	August 11 2018	Tycho,Jamie XX,Florence and the Machine,	Golden Gate Park	San Franciso	California
6	August 4 2018	The Regrettes,The Vaccines,	Schubas Tavern	Chicago	Illinois
7	August 3 2018	morgxn,Carly Rae Jepsen,	Park West	Chicago	Illinois
8	August 2 2018	Future Feats,The Wombats,	Lincoln Hall	Chicago	Illinois
9	July 20 2018	Lawrence Rothman,Rhye,	The Warfield	San Franciso	California
10	July 14 2018	Manics,Luxury,Goldroom,Gigamesh,	San Francisco Belle	San Franciso	California
11	July 10 2018	Beverly,We Are Scientists,	The Chapel	San Franciso	California
12	June 16 2018	Shamir,Stars,	The Fillmore	San Franciso	California
13	June 3 2018	Lord Huron,	Fox Theater	Oakland	California
14	May 17 2018	Poolside,	Rickshaw Stop	San Franciso	California
15	May 10 2018	Little Junior,Born Ruffians,	Slim's	San Franciso	California
16	May 8 2018	Yoke Lore,Frenship,	The Independent	San Franciso	California
17	May 2 2018	Daydream,Bad Cop Bad Cop,Smoking Popes,	Bottom of the Hill	San Franciso	California
18	April 28 2018	Little Monarch,Penguin Prison,	The Independent	San Franciso	California
19	April 21 2018	Kiefer Shackelford,Moonchild,	The New Parish	Oakland	California
20	April 20 2018	Palms,Mikey Mike,Coast Modern,	The Independent	San Franciso	California
21	April 18 2018	Wingtip,IHF,Petit Biscuit,	Fox Theater	Oakland	California
22	April 14 2018	Jean Jean,Carpenter Brut,	Regency Ballroom	San Franciso	California

# Modular Input: Spotify Library Data

# Modular all the things!

- ▶ Wrote a python script to pull Spotify library data
  - ▶ Migration to a modular input is IN PROGRESS 
  - Spotify API uses OAUTH and an authorization flow
  - Still not sure how that authorization flow will look in Splunk.
  - Explored using HEC to push the data in, but there is no mechanism for push in the API.
  - Need more time to sit with this and get it going somewhere. 🤷♀️ ♀

# Now what?

## Analyze and visualize!

# Search and Visualize

Iterate constantly to get the most precise answer

- ▶ Start with a list of questions
- ▶ Identify the data necessary to answer them
- ▶ Write searches to get the answers you want
  - Write better and faster searches the better you get at SPL
  - Identify spots where you can do calculations elsewhere
- ▶ Create visualizations to show off the answers you find
- ▶ Create better visualizations the more you understand inputs and annotations and custom visualizations

# Artist discovery vs popularity

Hipster status: intact

**Earliest Track Listens By Artist : "The Vaccines"**

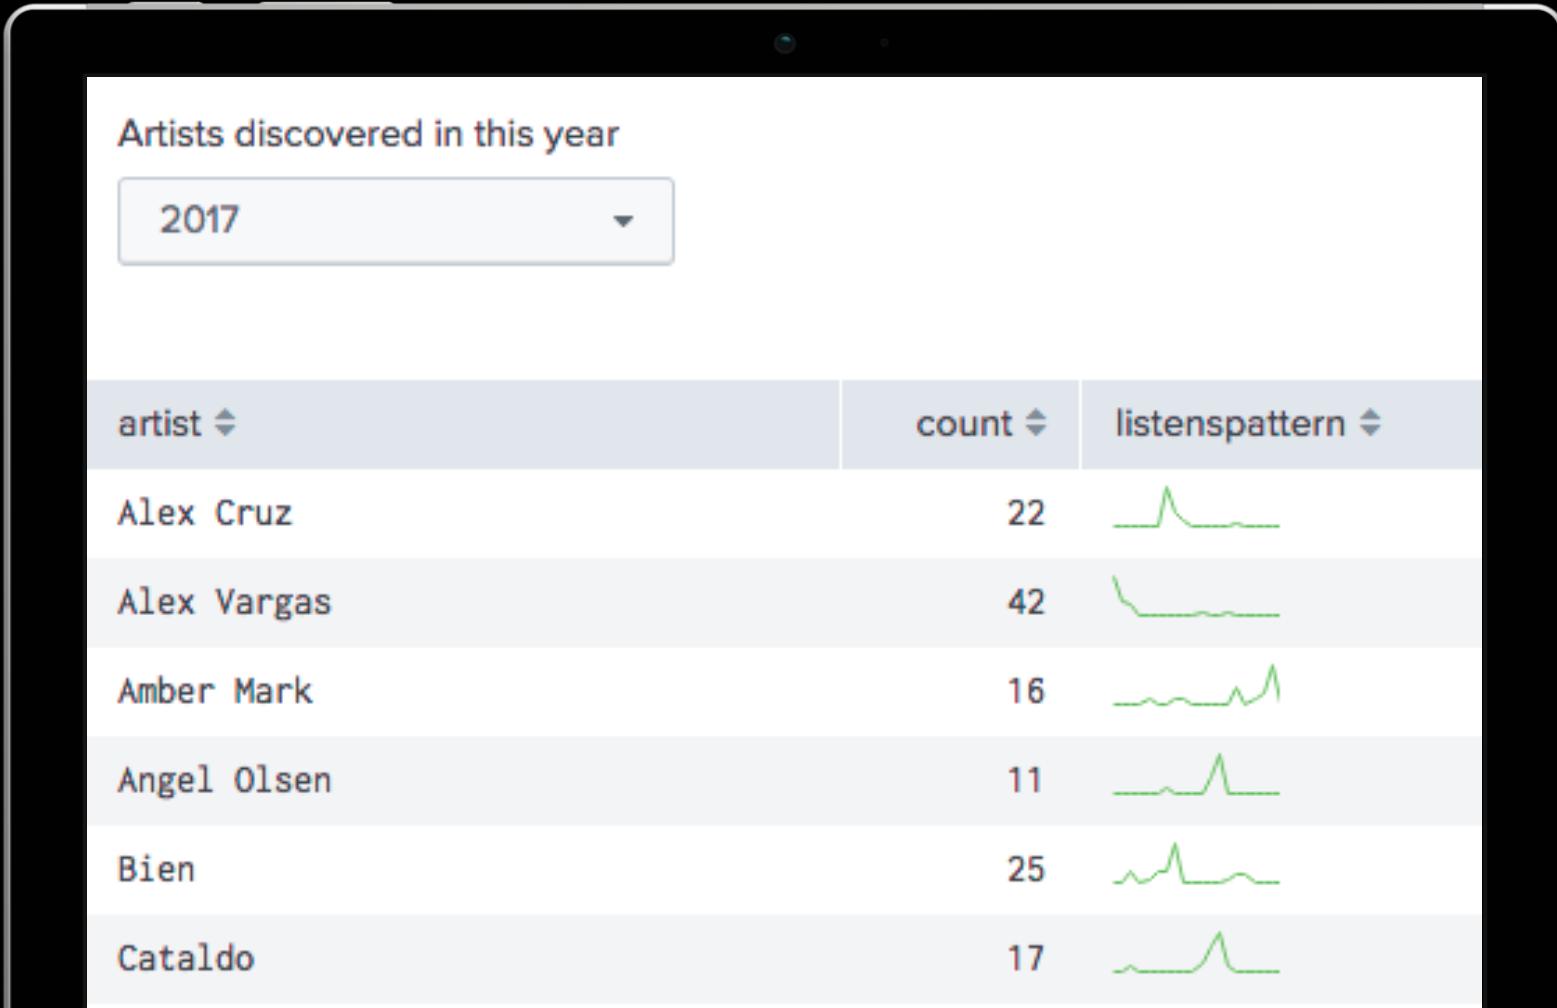

artist	track_name	earliestlisten
The Vaccines	Nørgaard	06/12/2011 04:38:06
The Vaccines	Post Break-Up Sex	04/04/2012 21:22:00
The Vaccines	Blow Your Mind	06/27/2013 14:47:39
The Vaccines	No Hope - Live in Brighton	06/27/2013 14:49:48
The Vaccines	No Hope	10/29/2014 17:11:18
The Vaccines	If You Wanna	09/04/2015 12:30:30
The Vaccines	Nørgaard	09/06/2015 18:56:20
The Vaccines	I Always Knew	04/01/2016 16:18:30
The Vaccines	I Can't Quit	01/05/2018 13:00:25
The Vaccines	Nightclub	01/27/2018 17:46:59
The	Put It On a T-Shirt	03/12/2018

**Top Listens by Artist: "The Vaccines"**

track_name	album	artist	listens
Nørgaard	What Did You Expect from The Vaccines?	The Vaccines	53
If You Wanna	What Did You Expect from The Vaccines?	The Vaccines	17
Wreckin' Bar (Ra Ra Ra)	What Did You Expect from The Vaccines?	The Vaccines	15
Wetsuit	What Did You Expect from The Vaccines?	The Vaccines	13
Under Your Thumb	What Did You Expect from The Vaccines?	The Vaccines	7
No Hope	No Hope	The Vaccines	6
Blow It Up	What Did You Expect from The Vaccines?	The Vaccines	4
Post Break-Up Sex	All Things Go West Mixtape	The Vaccines	4

- ▶ One dashboard input used by two panels
- ▶ One panel pulling earliest listen data
- ▶ One panel pulling top listens
- ▶ Both panels using Last.fm data

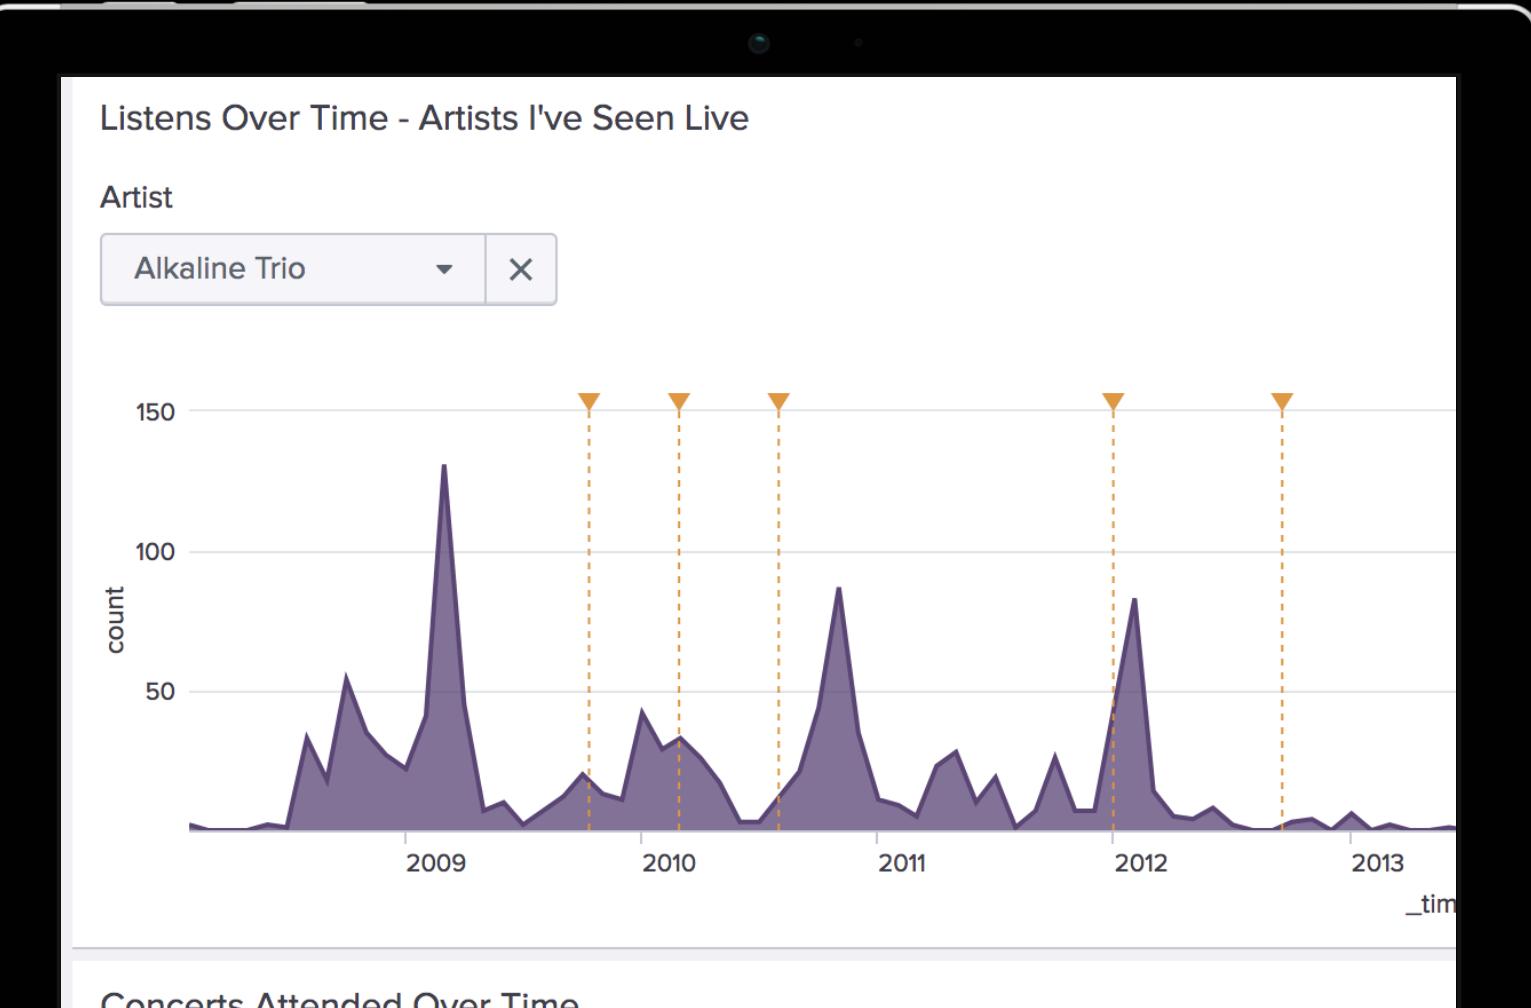

# Artist discovery for a particular year (usually lots)

- ▶ Use a search-driven lookup to store the “earliestlisten” of an artist
- ▶ Combine that with a dashboard input to search for a particular year
- ▶ Use sparklines to track listens throughout the year

# What's my listening pattern around a concert?

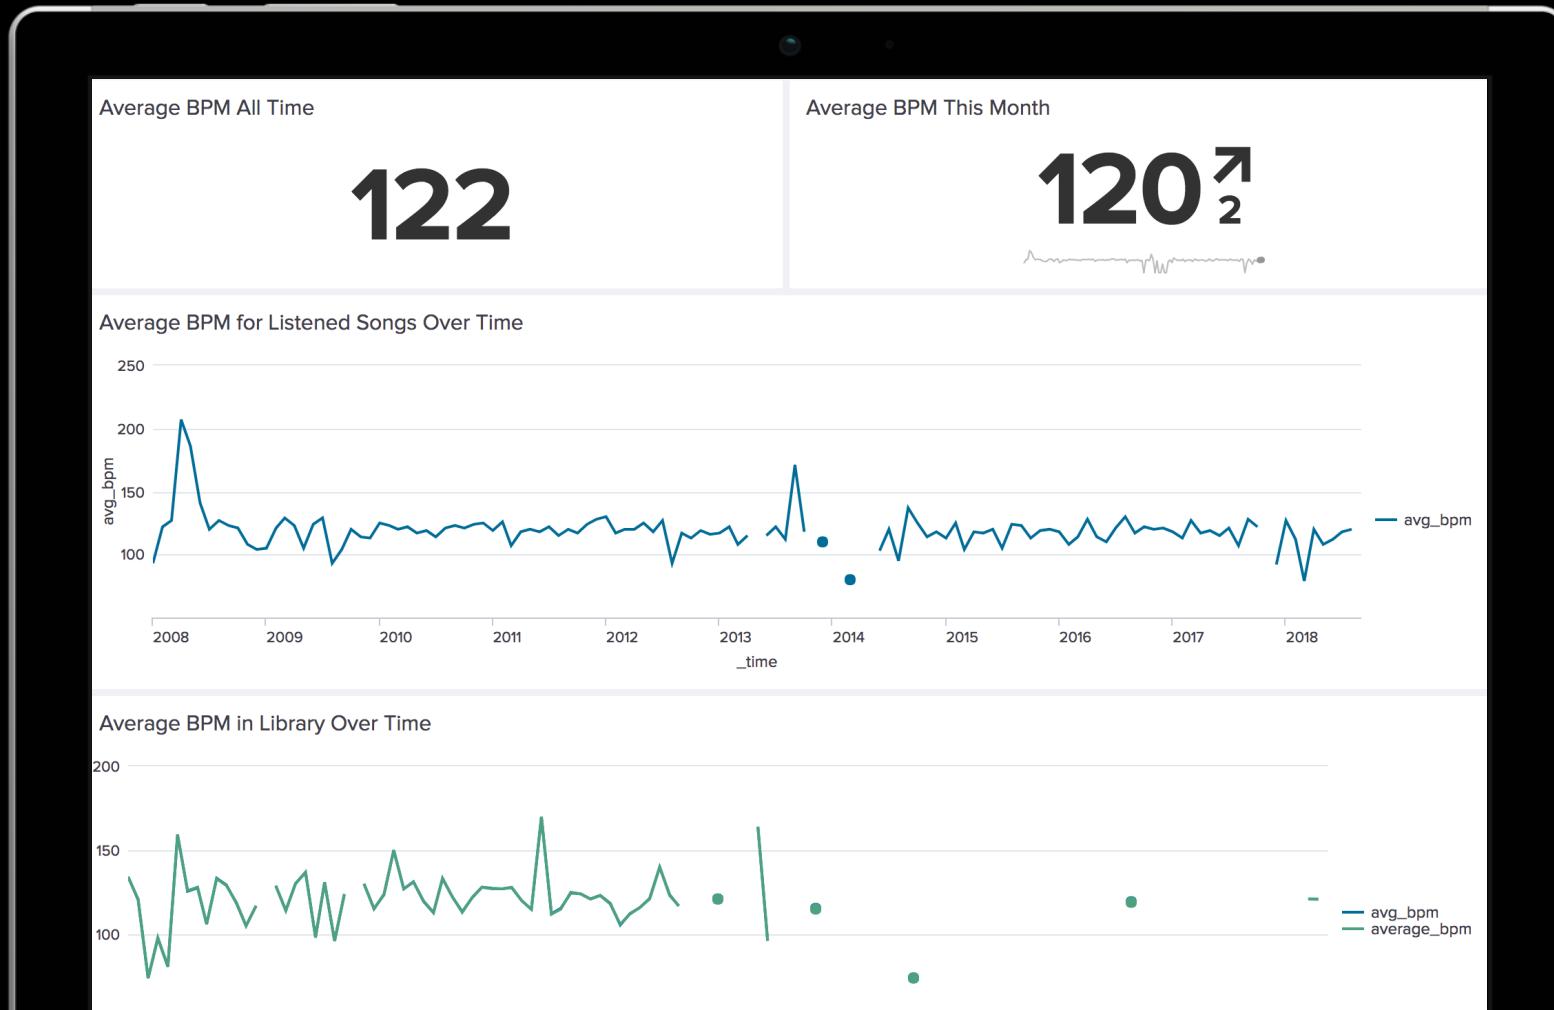

## Sporadic correlations

- ▶ Used event annotations to compare concert dates with listening patterns
- ▶ Sporadic, inconsistent correlations
- ▶ See the appendix for the XML

# BPM Listen Analysis

Oontz oontz oontz

- ▶ Analyze BPM trends by combining iTunes metadata with listening data
- ▶ BPM is in iTunes data
- ▶ Store that in a search-driven lookup for quick enrichment

# Who Is On Tour?

Powered by Songkick

The screenshot shows a Splunk search results page with the title "Songkick Concerts". At the top, there is a search bar with the filter "Last 7 days" and a "Hide Filters" button. To the right are "Edit", "Export", and "..." buttons. The main area displays two tables under the heading "Upcoming Concerts for Artists". The first table lists a concert for "Bomba Estéreo" at the "Fox Theater - Oakland" on December 7, 2018. The second table lists a concert for "Snail Mail" at "The Fillmore" on January 24, 2019. Below these tables is a large watermark that reads "powered by songkick". The bottom section of the page contains two more tables: "Artists Not On Tour" and "Artists on Tour but not in SF". The "Artists Not On Tour" table includes rows for "Josh Homme", "Baaba Maal", "Lilacs & Champagne", "Beverly", and "Gerald Toto", all of whom have "No Concerts". The "Artists on Tour but not in SF" table includes rows for "Faze Action", "Jeff Rosenstock", "LUXURY", "Little Junior", and "MHD", all of whom have "No SF Concerts".

concert_name	concert_artist	concert_datetime	concert_venue
Bomba Estéreo at Fox Theater - Oakland	Bomba Estéreo	2018-12-07T20:00:00-0800	Fox Theater - Oakland
(December 7, 2018)			
Snail Mail at The Fillmore	Snail Mail	2019-01-24T20:00:00-0800	The Fillmore
(January 24, 2019)			

artist	Concerts	artist	concerts	count
Josh Homme	No Concerts	Faze Action	No SF Concerts	2
Baabaa Maal	No Concerts	Jeff Rosenstock	No SF Concerts	350
Lilacs & Champagne	No Concerts	LUXURY	No SF Concerts	5
Beverly	No Concerts	Little Junior	No SF Concerts	20
Gerald Toto	No Concerts	MHD	No SF Concerts	10

- ▶ Combines events created by the alert action with log messages generated by various types of failed responses from the Songkick API

# What's in the future?

## What do I still want to do?

# Future use cases

## What I want to know that I need more data to know

- ▶ As I explored my data, I found new use cases that I wanted to answer with other data types:
    - What “types” of music do I listen to? How has that changed over time?
    - Calculate a popularity score for what I listen to and compare it to Spotify’s popularity score.
    - Personal one hit wonders?
    - Do I prefer music created in specific geographic regions?
    - Track music discovery across services, from first listen until iTunes library
    - What audio features are common across my most-listened-to songs?
    - Music taste prediction algorithm based on audio features and other features??

# Future data types and analysis

## Data growth

- ▶ MusicBrainz metadata about artists and tracks
  - Release dates of tracks and albums
  - Geographic location of artists
- ▶ Spotify audio feature data about tracks
  - Collect and analyze audio features
  - Can enhance existing library knowledge
  - Enrich beyond Spotify data

# Key Takeaways

20 minute talks are short

1. Identify your use cases before you get data in
2. Identify the data you need to satisfy the use cases
3. Plan GDI according to data format and needs
4. Iterate searches and visualizations for precision
5. Record use cases that come up during data analysis

# Thank you!

Don't forget to rate this session  
in the .conf18 mobile app

# Appendix

All the configurations fit to include

# Learn More

## About my specific project

- ▶ See my Splunk blog post: <https://www.splunk.com/blog/2018/01/04/10-years-of-listens-analyzing-my-music-data-with-splunk.html>

# Learn More About Specific Configs

# How did she do that?

- ▶ In the following slides, you can see the configurations I used
  - ▶ Some configurations support getting data in
  - ▶ Other configurations support visualizing the data
  - ▶ In many cases I'm showing the raw configs or the raw XML, but you can often do these configs in the UI. It's simpler for me to show you the end product than the step-by-step UI instructions.

# iTunes props.conf

## XML library props.conf

```

45 [itunes_xml]
46 KV_MODE = none
47 LINE_BREAKER = (<dict>)
48 BREAK_ONLY_BEFORE = (<dict>)
49 DATETIME_CONFIG =
50 NO_BINARY_CHECK = true
51 SHOULD_LINEMERGE = false
52 TIME_PREFIX = <key>Date Added</key>
53 disabled = false
54 pulldown_type = true
55 TRUNCATE = 500000
56 category = Custom
57 REPORT-itunes_xml = itunes_xml
58

```

- ▶ This assumes that you have copied-pasted the tracks out of your library.xml file and into a dedicated file.
- ▶ The full library.xml file includes other details like podcasts and playlists that I didn't want to deal with yet.
- ▶ This is also missing a sed replacement for &, as those are not transformed from & to &

# iTunes transforms.conf

# XML library field transformations

- ▶ The first extraction is for most tracks
  - ▶ The second extraction catches some with a slightly different format

```
8 [itunes_xml]
9 REGEX = <key>([<^>]+)</key><[^>]+>([<^>]+)</
10 FORMAT = $1:::$2
11 CLEAN_KEYS = true
12
13 [itunesxmlbool]
14 REGEX = <key>([<^>]+)<\key><( .+?)\/>
15 FORMAT = $1:::$2
16 CLEAN_KEYS = true
```

# Add-on builder data input settings

## For the Last.fm API

Data Input Definition      Add-on Setup Parameters

**REST settings**

REST URL

```
http://ws.audioscrobbler.com/2.0/?method=user.getrecenttracks&user=${user}&api_key=${__settings__.additional_parameters.api_key}&format=json&limit=100&extended=1&from=${scrobbletime}
```

REST method

GET

REST URL parameters

Name	Value
method	user.getrecenttracks
user	\${user}
api_key	\${__settings__.additional_parameters.ap
format	json
limit	100
extended	1
from	\${scrobbletime}

New parameter

- ▶ Make sure the REST URL references all the parameters you set up
- ▶ The value of the REST URL parameters can be from the script you write, the setup pages, or the checkpoint variable you set.

# Add-on Builder event breaking and checkpoint settings

## For the Last.fm API

### Event extraction settings

If the response payload is an array, enter the JSON path to the array in the payload to use for breaking the data into individual events.

JSON path

### Checkpoint settings

Use checkpoints for incremental data collection. [Learn more](#)

Enable checkpointing

\* Checkpoint parameter name

\* Checkpoint field path

\* Checkpoint initial value

- ▶ Setting a JSON path for the event extraction is very convenient and I love it.
- ▶ When you add a checkpoint parameter name, remember to add it to the REST URL parameters!!
- ▶ Set a checkpoint initial value especially if you have done backfilling of your data.
- ▶ The add-on builder highlights the JSON response to help you determine if your field path is accurate.

# Songkick alert action script

**The method that calls the API and queues events**

```

## This method will do the actual work of calling the API itself
def dowork(self, result):
    ## get api_key from TA setup
    api_key = self.configuration.get("api_key")
    ## get artist_mbid (default is none)
    artist_mbid = result.get("artist_mbid")
    ##
    if artist_mbid:
        url =
"https://api.songkick.com/api/3.0/artists/mbid:{0}/calendar.json?apikey={1}".format(artist_mbid,api_key)
        self.message('Calling url for artist {0}'.format(artist_mbid))
        ## build sourcetype
        sourcetype = 'songkick'
        ## make request
        r = requests.get(url)
        ## process successful request
        if r.status_code==200:
            self.message('Successfully asked Songkick for concerts', status='success')
            ## songkick returns a whole boatload of concerts
            ## all part of one json for each artist
            loadConcert=json.loads(r.text)
            ## Filter to return only results with actual upcoming concerts
            if loadConcert['resultsPage']['totalEntries'] > 0:
                ## record the fact that there are actual concerts
                ## self.message('There are concerts for artist {0}'.format(artist_mbid))
                ## Determine if those concerts are in the SF Bay Area and if yes, add the concert
                for locale in loadConcert['resultsPage']['results']['event']:
                    if locale['venue']['metroArea']['id']==26330:
                        concert=json.dumps(locale)
                        self.addevent(concert,sourcetype=sourcetype)
                        self.message('Successfully queued concert events for writing to index',
status='success')
                ## If there are no concerts in the SF Bay Area, log that and where they are instead
                else:
                    place=locale['venue']['metroArea']['displayName']
                    self.message('No concerts in SF Bay Area for artist {0}, instead in
{1}'.format(artist_mbid,place))
                ## If there aren't any events for the artist, log that fact.
                else:
                    self.message('No concerts for artist {0}'.format(artist_mbid))
            ## process unsuccessful requests
            else:
                self.message('Failed to ask Songkick for concerts',
status='failure',
status_code=r.status_code)

```

- ▶ Working to provide the full script online as well as a blog post.
  - ▶ This is the functional part of the script I wrote for the Songkick alert action.
  - ▶ Missing parts: imports, writing the events to Splunk, most error handling

# Recommended lookup headers

Pick a consistent date format for easy transformation

► For ticket data

purchase\_date, onsale\_date,  
concert\_date, artist, site, promoter,  
quantity, cost, face\_value, discovery

► For concert data

Date, artist, venue, city, state

► But also

Date, opener1, opener2, opener3,  
headliner, venue, city, state, info,  
festival\_name, band5, band6, band7

► Pick a consistent date format for  
easy transformation

► Choose which extraneous metadata  
about concerts you want to include

► Use the full state name instead of  
the two letter abbreviation to make  
KMZ lookups work

► I use “info” to designate if it’s a  
festival or a DJ set or something  
else as needed.

# Spotify progress

# Spoilers: not much

```
14 # Prompt the user for authorization in order to get an authorization token
15 token = util.prompt_for_user_token(username,scope,client_id,client_secret,redirect_uri)
16 # The redirect_uri must be whitelisted at https://beta.developer.spotify.com/dashboard/applications/
17
18 # Docs about the util above:
19 # Call util.prompt_for_user_token method with the username and the desired scope (see Using Scopes for
20 . information about scopes) and credentials. This will coordinate the user authorization via your web browser and
21 . ask for the SPOTIPY_REDIRECT_URI you were redirected to with the authorization token appended. The credentials
22 . are cached locally and are used to automatically re-authorized expired tokens.
23
24 ## This is where the magic happens as far as getting saved tracks with _time as date_added
25 ## Validate that there is a token provided
26 if token:
27     sp = spotipy.Spotify(auth=token)
28     ## Get results from the Spotify API for the saved tracks of the current user
29     ## Query parameters for the API endpoint go in the parentheses
30     results = sp.current_user_saved_tracks(limit=5)
31     for x in results['items']:
32         track=json.dumps(x)
33         print(track)
34 else:
35     print "Can't get token for", username
```

- ▶ Right now the script hardcodes the scope, username, client\_id, client\_secret, and redirect\_uri
  - ▶ The Spotify library makes everything easier to use
  - ▶ As you can tell, lots of work to do to convert this to a modular input still.

# Earliest listen search-driven lookup

- ▶ Test the search in the search pipeline first before scheduling it
  - ▶ Do inputlookup append=t before you do the outputlookup

Title	Earliest Listens - Lookup Gen
Description	Updates earliestlistens.csv
Search	<pre>'lastfm'   stats min(_time) as earliestlisten by artist   inputlookup earliestlistens.csv append=t   stats min(earliestlisten) as earliestlisten by artist   eval year = strftime(earliestlisten,"%Y")   outputlookup earliestlistens.csv</pre>

```

- ▶ The dashboard input is populated by a search into the lookup.
  - ▶ The event annotation search has a type=“annotation”
  - ▶ The other search is real basic.

# BPM Listen Analysis

## XML for the trending BPM over time indicator

```

<panel>
  <title>Average BPM This Month</title>
  <single>
    <search>
      <query>`lastfm` | table track_name,artist,_time | lookup trackbpm.csv track_name OUTPUT BPM | search BPM!="" | table BPM, track_name, _time | where BPM
        &lt; 200 | timechart avg(BPM) as avg_bpm | eval avg_bpm=round(avg_bpm)</query>
      <earliest></earliest>
      <latest></latest>
    </search>
    <option name="drilldown">all</option>
    <option name="refresh.display">progressbar</option>
  <drilldown>
    <set token="BPM">$click.value2$</set>
    <link target="_blank">https://www.youtube.com/results?search_query=$BPM+$bpm</link>
  </drilldown>
</single>
</panel>

```

Title	Track BPM - Lookup Gen
Description	Updates trackbpm.csv
Search	index=music sourcetype=itunes_xml   search BPM!=""   inputlookup trackbpm.csv append=t   table BPM,track_name   outputlookup trackbpm.csv
Earliest time	-1d
Latest time	+0s

Time specifiers: y, mon, d, h, m, s [Learn More](#)

- ▶ Used a search-driven lookup to combine tracks with bpm to make it easy to enrich at search-time
- ▶ Removed empty values from the results
- ▶ Tracked the average BPM per month over time.
- ▶ Added a drilldown for the BPM value so I could look up songs with that BPM.

```

- ▶ The first row has one panel that is using the events created by the Songkick alert action and the other panel displays the attribution image.
  - ▶ The second row is a panel that is taking data from the log, uses a lookup to get the artist display names, and display the artists that do not have concerts.
